Spectro | Jet-Care bring independent laboratory analysis expertise to SMM 2022

(British Pavilion Booth #B1.OG.302 Hall B1 Upper floor)

Spectro | Jet-Care, the leading independent laboratory providing analysis services to the global marine industry, will be exhibiting at SMM 2022 in Hamburg this week. The analysis service is an important tool for condition monitoring and allows clients to better understand the health of their engines, propulsion units, hydraulic equipment systems as well as oil performance and condition.

Joining the exhibition line-up for the first time enables Spectro | Jet-Care to offer its 46 years experience providing fluid condition monitoring to the marine industry, via its three strategically located laboratories in the UK, USA and Switzerland.

“We have over 46 years’ experience in this technically demanding market and pride ourselves on the focus we give to protecting customers’ assets, ensuring they receive the highest quality service and technical guidance that only a truly independent laboratory group can provide” said Larry Rumbol, Marine Business Development Manager, Spectro | Jet-Care. “We understand that vessels often operate in extremely harsh conditions with critical systems working at optimum levels, therefore our commitment to quality and customer service excellence allows customers to maintain serviceability of their vessels and ultimately to deliver a more effective way to manage their operational costs”.

In addition, the work undertaken by Spectro | Jet-Care with major airline operators as well as its marine customers brings new levels of technology, accuracy and repeatability to this market. In the air, machinery failure is never an option – Spectro | Jet-Care aim to make that a mantra for seagoing operations too, handling machinery breakdowns at sea should be destined for the history books.

The Company’s three state-of-the-art laboratories offer a comprehensive range of services – Oil, Hydraulic Fluid, Fuel, Grease, Debris and Filter Analysis – plus a new addition, Fire Water Mist / Fog Systems - all developed to identify operational issues at the earliest possible stage. In addition, all three laboratories maintain the same exacting standards and are supported by the highest industry recognised accreditation, ISO/IEC 17025:2017 testing and calibration laboratory standard.
