Odiham, Hampshire – 23rd May 2022

Spectro® | Jet-Care® to provide debris analysis services to Rolls-Royce CorporateCare® Enhanced customers

Spectro | Jet-Care, the leading independent laboratory providing condition monitoring services to the global aviation industry, are pleased to announce they have been chosen by Rolls-Royce to provide debris analysis services to support the Rolls-Royce CorporateCare Enhanced aftermarket service.

Spectro | Jet-Care have partnered with Rolls-Royce to provide debris and filter analysis service to operators enrolled on Rolls-Royce CorporateCare Enhanced contracts. Rolls-Royce has set the standard for this program by providing high quality support as well as increased engine availability, this combined with Spectro | Jet-Care's fast and efficient laboratory analysis program gives customers an enhanced service offering.

In the unlikely event of a chip or filter indication debris samples will be taken from operators' engines and sent to one of three Spectro | Jet-Care state of the art laboratories, based in the UK, USA or Switzerland. The analysis is undertaken by an experienced analyst using a Scanning Electron Microscope (SEM) to identify the type of material, quantity, size and appearance enabling quick and accurate decisions to be made by Rolls-Royce and the operator, therefore allowing the aircraft to return to service as quickly as possible. An AOG service is also available 24/7/365.

"We are delighted to be working with Rolls-Royce in providing debris analysis service support to their CorporateCare Enhanced aftermarket customers" said David Glass, Managing Director of Spectro | Jet-Care. "We have been supporting the industry for over 46 years and with fast sample turnaround and experienced technical teams our first-class analysis service combined with the CorporateCare support provides customers with added peace of mind".

Megha Bhatia, VP Sales & Marketing - Business Aviation, Rolls-Royce, said: "We clearly developed our market-leading CorporateCare Enhanced service with our customers in mind. Adding oil and debris analysis to the comprehensive list of covered services for our CorporateCare Enhanced customers was a logical step and we look forward to working together with the experienced team of Spectro | Jet-Care on delivering this new feature to our customers."

Spectro | Jet-Care has established a centre of excellence for laboratory analysis and place a special focus on creating tailored analysis programs that meet the customer's individual needs; one size does not fit all. Maintaining a quality service is fundamental to the Company's offering and it recognises that the latest accreditation plays a key role in delivering quality results time and time again, whichever laboratory the customer sends samples to. Spectro | Jet-Care laboratories all adhere to the same quality system, verified by UKAS and SAS, ensuring compliance with ISO/IEC 17025, the testing and calibration laboratory standard.
